IMPORTING AUDIO TO A COMPUTER

- Make sure that power is off
- Connect the recorder to the computer using the USB cord

- Press and hold the USB button on top of the recorder
- While pressing down the USB button, turn on the recorder
- The recorder will say USB on the LCD panel
- If using a MAC, your audio files will be located in a recorder icon which will appear on the desktop.
- To locate your files on a PC click Start > My Computer and it will be located under devices.
PLAYBACK PROCEDURE

• Turn power switch on.
• Press the play button to play from the beginning.
• Press the stop button to stop playback.
• Press play when you locate the track you want to play.
• Use the Track Jump buttons to navigate to a specific track.

BASIC SETUP

Using Power Adapter

The power adapter is plugged into the right side of the recorder. Plug the other end into an electrical socket. The recorder can run on 4 AA batteries* if you choose not to use the power adapter.

*Batteries not provided

Turning Power On

The power switch is located on the right side along with the power adapter slot. Simply slide the switch from off to on.

Plugging in a Microphone

The microphone is plugged into the back of the recorder. There are two XLR slots for the microphone. For mono sound use the slot labeled L. To remove the microphone push down and hold the button that says push, then pull out the microphone.

RECORDING BASICS

With Microphone

Plug in the microphone into the desired slot. Turn the power switch on and press the record button. If you want to pause the recording, press Rec Pause. To stop recording press Stop.

Tracks

Every time you stop and start recording you create a new track or file. When reviewing your audio you can play individual tracks.

Deleting Tracks

Press Shift + Menu/Store. Track Erase will appear on the screen. Navigate to the track you want to delete by pressing the track jump buttons. Once you find the track you want to delete press Enter.

Audio Levels

You can view the recording levels on the front of the recorder. The knob to the right is used to adjust the recording levels. The inner knob controls the right channel and the outer knob controls the left channel. The optimum recording level is when the level meter goes as close to 0db as possible but does not go OVER.
